The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Tanaka et al. JP 3-260415.

Tanaka discloses in Figures 3 and 4 a fluid dynamic bearing apparatus comprising a hydrodynamic groove region in which a plurality of hydrodynamic grooves (7) are arranged, a smooth surface (4) opposing the hydrodynamic groove region, and a bearing gap (6) which is formed between the hydrodynamic groove region and the smooth surface and in which a fluid dynamic pressure is produced by relative rotation of a fixed side and a rotation side, the smooth surface being defined by a step (adjacent 20) so that its length becomes shorter than that of the hydrodynamic groove region (L<I). With respect to claim 2, Tanaka discloses a bearing sleeve (36) and a shaft member (3), the bearing gap being formed between the inner circumferential surface of the bearing sleeve and the outer circumferential surface of the shaft member. With respect to claim 3, the shaft member of Tanaka is provided with a flange portion (39) overhanging to the outer diameter side and the bearing gap is further formed between an end face of the flange portion and a face opposing the end face. With respect to claims 5-7, the device of Tanaka is a motor.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3656

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4 and 8 are rejected under 35 U.S.C. 102(b) as anticipated by Tanaka et al. JP 3-260415 or, in the alternative, under 35 U.S.C. 103(a) as obvious over Tanaka et al. JP 3-260415 in view of Shiranami et al. JP 11-190344.

Regarding the method limitations of claim 4, it is noted the patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). The grooves of Thorpe anticipate the language of the product by process limitation of claim 4. Alternatively, the process of plastically processing a grooving pattern corresponding to its shape is shown to be known in the art by Shiranami, and thus it would have further been obvious to one of ordinary skill in the art at the time the invention was made to form the hydrodynamic grooves by the known process of plastically processing. With respect to claim 8, the device of Tanaka is a motor.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas R. Hannon whose telephone number is (571) 272-7104. The examiner can normally be reached on Monday-Thursday (8:30-7:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard WL Ridley can be reached on (571) 272-6917. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
